CONDITIO ANNI GENERALIS.

ANNUS 1791 suo oeconomico initio, omnibus & universis per Bohemiam agricolis spem non exiguam faciebat fore, ut a cultura terrae proventus insignes exspectari merito possent, annorum priorum penuria, maceriesque, abundantia omnium frumenti generibus compensaretur; gaudere videbamus agricolas, gemere e contrario frumenti omnis generis confarcinatores, lucrique cupidos; hi enim suis abundantibus segetibus domi latitare coacti, ne iis maledicatur; isti vero, patentibus agrorum deliciis exultantes sua ubique avaris gaudia oggerentes, audiebamus; veris enim initium agros optime constitutos commonstrabat, praecedentesque duos superare, & quantumvis annus currens in serie abundantissimorum locari non queat, nihilominus tamen propter pretium diversi generis frumenti, quod summo, tanto tempore fuerat, quin immo fere continuo crescebat, sibi quae simile & aequale constabat, variantibus agricultura casibus; tandem eventu futuro bonae messis repente cecidit; putasses omnino agricolas, pretii repentina levitate, consternandos? sed gaudere vidisses propterea, quod, copia manipulorum colligendorum pretii levitatem compensatura sit; qualem igitur dices nominabisque annum 1791? — abundantissimum? non; mediocre communemque abundantem, tuto voces. Triticum enim & hordeum, ab agris bene constitutis, messe illatum & tritum, dabat in singulis manipulis duas tertias modii Bohemici granorum copiae.

Pis fativis & *Ervis* lentibus L. similia, nec communi anno accedunt medio, suis proventus; hinc quid mirum? si pretium hujus generis pultium tritico non modo aequale, sed & longe superius fuerit; cum tamen consuetudo legis instar recepta per Bohemiam fuerit, ut pultes cum hordeo pari passu ambulent; sed pretii elevati causa illa est; quod & siccitas

Ephemer. anni 1791.

M

diu

diu dominans tempore florum pisonem ingruerit, frigusque immistum florem adusserit; sed mali hic finis non erat: *Aphides* variarum specierum L. damnum hujus generis pultium vehementer auxere; nocuenti tanto plus erat ex eo, quod ab annis duobus praecedentibus nihil servari potuerit, plurimique patrum familias ob ingentis pretii summam de hoc genere feminis sibi comparare, terraeque committere voluerint; hinc ipse non miror, si *Pisa* sativa & *Erva* lentes triennio tanto devorare pretio debuerim!

Cara omnino haec erant! sed tamen pro pecoribus annona levior venit; frigus quidem mensibus Majo, Junioque ingruens, siccitati diuturniori junctum foeni abundantiam non mediocriter impedivit, ita, ut etiam gramen secundo sectum, vix ac ne vix quidem necessitati extremae profuisset, nisi abundantia straminis defectum hunc non sat deplorandum suplesset, & tamen agricolarum testimonio, plus foeni anno hoc illatum est, quam priori, vel propterea leviori, si vaenuerit, mirandum non est!

Cannabis sativae seminatio voto prorsus non respondit laborantium, sicut & olera, *Brassicae* napi sativae ne minimum succedere; tanto major nihilominus erat abundantia radicum *Solani* tuberosi.

Arborum fructus, omnis generis, fere nulli! arbores siquidem *Amygdalus* persica florens & *Sambucus* nigra 20 Martii frondescens &c. solito citius florentes, copioseque, pruina 8 Maji, & ad 21 ejusdem fere continuante, omnes sunt enectae; flos adustus, gemmae serius protuberantes, & a pruina omnino liberae, suppressae tamen, quasi putrida a corpore membra decidere, & superstites larvis lepidopterorum una cum foliorum numero depaetae sunt.

Temperatura mensium hyemalium mitis omnino erat, quam observationes thermometricae solae insolitam omnino nostro, & vicinis climatibus demonstrant; si defectus humoris brumalis accusetur; is omnino tantus non erat, ut anno praecedente; verum est; nives decimas diu telluris stratum non occupavisse, sed hac tamen diuturnitatis mora erant proficuae. Quid ver terrenum praeter consuetudinem citius effectus suos exeruerit, si non alia, Calendarium florum omnium vicinarum provinciarum, decidit; praeterea volucres migrantes sub Martii initium comparuere, non nisi sero Aprili ad nos adventare solitae. Ipsae *Vites* viniferae in locis montanis jam mense Martio stillarunt; *Hirundines* urbanae, rusticae sub finem Martii volitare ceperunt, continuo numerosiores advolantes, permanentesque. A tonitruo (die 7 Aprilis) omnium primo, graminis vegetatio, & propulatio erat insignis, & admiranda; *Prunus* cerasus, spinosaeque a 22 Aprilis omnibus in locis summo in flore erant constitutae; quae tamen omnia pruina 8 Maji si non penitus deleta, potissimum tamen destructa sunt. Ipsae filiginis spicae solito citius protuberabant, & eodem frigoris malo subreptae paulum post canescebant, femineque prorsus omni destitutae consistebant. Verum est, quod tempestas Majo mense frigido sicca observabatur, humor tamen non desiderabatur, immo sufficiens repertus est; Junii aura frigidiuscula pratorum altiorum graminationi obsuit. Julii humor

humor calori conjunctus exoptatissimus fuisset, si uno mense prius extitiret. Calidissimus Augustus locorum omnium erat messis promotor maximus, urgentissimusque; sed frigus post tantum aestum, in autumno opinabatur nemo repentinum futurum non modo, sed etiam diuturnior calor, qui potius Decembri ingruit, expectabatur; hoc frigore brumalis satio retardata, vel ubi tamen semina jacta sunt, radices multum debiles fixere; scaturigines hoc autumnii tempore denuo defecere. Folia arborum diu virescentia sero autumno in arboribus adhuc consistere; medio Octobri tamen hinc inde foliicidium subsecutum est repentinum. *Phalena* neustriae larvae erant copiosae; *Scarabaeorum* melolontharum numerum *Scarabaei* solstitiales superabant, neque profunde sub terra latitabant, ex utroque signum pro re significata, quod Majo & Junio 1792 verificatum est. Novembris initium ut strenue frigidum, ita medium erat tepidum, ut arandi data sit communis occasio. Sed etiam Decembris tempestatem potius tepidam, quam humido frigidam appellare ausim, ut ipsae demonstrant observationes, & quamvis humor sufficiens videretur, scaturiginum incrementum observatum est nullum.

Tonitrua anni hujus sicut non erant frequentia, ita etiam non erant agriculturae, nec animalibus, plantisve noxia & periculosa. Morbi, praeter febres putridas aliquo anni tempore grassantes, periodici nulli.

Quam magnae, crebraeque fuerint mercurii in barometro mutationes, quam subitaneae una alteram subsecutae sint, ostendunt horis ab academia receptis factae observationes; illae vero, quas omni fere hora facere soleo, si projiciantur more meo, curvam oscillationis admirabilem producant; & quia hae mutationes locis etiam remotioribus obtinent, optandum omnino foret, ut hisce evenientibus casibus, suas quas solent meteorologi facere annotationes cum publico communes facerent, ut his in adjunctis differentia meridianorum meteorologicorum tanto facilius dignosceretur, temporisque momenta noscerentur, quibus causas suas primas sequatur effectus.

ANNOTATIONES SPECIALES IN OBSERVATIONES RATISBONENSES.

JANUARIUS.

- Die 1. Sol oriens colore fanguineo tinctus: nubes interruptae.
 2. Aura lenis recta ab illo horizontis puncto venit, in quo sol oritur; quod etiam heri observavi.
 8. Hora 3 mat. turbo vehementissimus: turbinem praecessit pluvia. Ventus hic thermometer tribus gradibus elevavit; etenim media nocte erat = 0, 5; ast h. 5 mat. 3, 5.
 13. Ad vesp. inexpectata acus magneticae variatio, nemine acum turbante; eodem tempore turbo, ut ita dicam, tepidus thermometer elevavit.
 15. Nocte inter 14 & 15 intercedente affidue pluit. Hora 5 mat. pluvia & turbo omnia miscuere. Vesp. halo duplex lunam cingit; exterior praegrandis coloribus prismaticis distinctus, inter quos eminent rubeus, flavus, viridis, caeruleus, hic lunae proximus est: halo interior nonnisi ex rubicundo & flavescente, ut alias, componitur.
 31. A summo mane coepit turbo, qui ad 3 usque Februarii non interruptus saeviit.

FEBRUARIUS.

- Die 2. Circa noctis medium tempestas eminens cum fulgure & tonitru; quae alibi saevior, haud procul Landshuto domum incendio vastavit.
 15. Tota die nebula crassa pluviae in modum deplua.
 23. Hora 5 vesp. tria nubium strata obervo: infimum tenuis fumi instar versus NW volat: medium densis ac fuscis nubibus constat, lentiusque promovetur: supremum denique albicans immotum stat; per hiatus caeruleum atmosphaerae adparet.

MARTIUS.

- Die 21. Circa meridiem altitudo barometi = 26, 3, 5. Paulo post pluvia tenuis, h. 2 grando (Riesel) levior, tum iterum pluvia cecidit: demum h. 2, m. 17 bis graviter intonuit: pluvia ad 4 vesp. perdurante. Circa hor. 7½ vesp. iterum pluvia & turbo. — Ad hunc diem pertinent inundationes, ac procellae, quas ex Belgio nobis novellae adtulerunt. Oscillationes barometri magnae, subitaneae, notatu dignae.
 24. Dies integer procellosus.

22. Hora 2 pomerid. nubes adhuc interruptae; vix autem dimidia hora abiit, quum ecce! coelum obduci nubibus, venti furere, tonitrua mugire, imbres effundi, ac demum grando insignis magnitudinis tecta quater, fenestras patentis diffingere, spemque coloni magna ex parte prosternere. — Grando hic per Zenith urbis nostrae transit, campos ad Austrum Boreamque sitos non attingit; quidquid vero occidentem ac orientem versus jacebat, magna, alicubi maxima ex parte vastavit; apud nos tria circiter minuta prima tenuit.

J U N I U S.

Die 7. Dimidia a meridie hora coepit pluere: tempestas simul eminus in N transit, haud procul Ratisbona etiam grando cecidit; unoque fulgure tres simul boves in campis pascentes enecati fuere. Hora $7\frac{3}{4}$ vesp. alia tempestas advenit, urbi proxima.

N O V E M B E R.

Die 2. Halo circa solem ab h. 10 — 12 merid.

18. Post med. noctem ventus vehemens; h. 6 mat. halo lunae; ab h. 1 pom. usque ad 5 pluvia tenuis cum nebula.

Nebula, quae a die 20 usque 24 h. m. atmosphaeram nostram occupavit, hygrometrum Lambertinum infra punctum maximae humiditatis integra revolutione, & quod superat, de-
preffit; ex quo concludendum, id genus hygrometra successu temporis a sua perfectione de-

DECLINATIO ACUS MAGNETICAE.

Declinatio acus magneticae apparuit eadem quae notata fuit anno praecedente, scilicet 19°, 50 circiter versus aquilonem, videtur tamen paulisper regredi.

Nulla observata fuit variatio diurna nisi raro & perpaucis diebus, & ne vix quidem sensibilis.

CONDITIO ANNI GENERALIS.

Hiems fere tepida, sine nive ac sicca. *Ver* humidum, non tam quantitate aquae, quam numero dierum. Grandines grassatae sunt longe lateque per Italiam totam, una cum turbibus, fulminibus &c. *Aestatis* prima pars humida, secunda ficcior & calidior. *Autumnus* humidus ac frigidior.

Triticī proventus valde modicus, ob teporem hiemis & veris atque aestatis humiditatem. Vindemia valde exigua: fruges autumnales aegre collectae: poma perniciem passa a grandinibus: bombicum reditus infra mediocritatem.

Videretur aestas humidior quam hiems, & revera prima pars aestatis fuit humidissima; at facta est compensatio in secunda, pro qua desunt observationes hygrometri.
